

220V inverter efficiency

Most modern inverters have efficiency ratings between 90% and 98%. Let's break it down: If you feed watts of DC power into your inverter and it outputs 950 watts of AC power, your inverter efficiency is 95%. The other 50 watts were lost in the conversion process--mostly as heat. In fact, inverter efficiency can vary dramatically between products, on average it is between 85% and 95%. For example, if you have an inverter with 85% efficiency it means only 85% of your battery power is being sent to your appliances. The other 15% is lost/used up in the inverter. The efficiency of an inverter refers to the amount of AC output power it provides for a given DC input. This normally falls between 85 and 95 percent, with 90 percent being the average.
