How does a tl494 inverter work?The inverter works based on the switching IC of TL494. The IC generates high-frequency pulses (about 30khz). The pulses are amplified by the MOSFET of IRF3205 and pass through the transformer. The Fast diodes are rectified and give the power output. Which ferrite core inverter should I buy?This inverter works based on a high frequency; its operating frequency is around 30-50khz. The normal 50hz transformer can not handle this frequency, so we need a Ferrite core transformer. the EI33 or EE35 ferrite core transformer is the best choice.
