

## Bhutan's annual electricity generation from solar panels

Bhutan inaugurated its first-ever utility-scale solar photovoltaic (PV) power plant on July 19 in Yongtru village, Sephu Gewog (Village Block), in Wangdue Phodrang in central part of Bhutan which is about five hours journey from the capital, Thimphu. Taking a major step forward in the country's Bhutan has launched its National Solar Energy Roadmap, aiming to diversify its energy sources and enhance energy security as it prepares for increased electricity demand. The roadmap emphasizes solar energy as a crucial step towards achieving energy self-sufficiency by , a goal that aligns with Nearly all of Bhutan's electricity comes from its glacier-fed hydropower plants. In a first major step towards diversifying its energy mix, the Himalayan Kingdom initiated a 180-kW grid-tied solar photovoltaic (PV) plant in Wangdue Phodrang district. This pilot project, supported by the Government apacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the cla at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global The first phase of Bhutan's first utility-scale solar power project at Sephu in Wangdue Phodrang is set for completion by March next year. A utility-scale solar facility generates solar power and feeds it into the grid. The 17.38-megawatt solar farm is expected to generate around 24 million units Bhutan Solar Initiative Project (BSIP) aims towards achieving a sustainable energy supply for Bhutan through alternative renewable energy sources of solar grid integration. About 60 De-suups have been actively involved in th is six-month long project and have gained practical knowledge of Assessment of solar energy generation potential in Western For this study, we designed and simulated a 12 kWp grid-tied solar PV systems using PVSYST software. The result showed the annual solar energy generation, final energy Bhutan's Biggest Solar Project Yet: A Giant Leap The Renewable Energy Management Master Plan estimates Bhutan's solar power potential at 12 gigawatts. The plant is expected to cut Bhutan's annual electricity imports by around 25 million units--an important Bhutan solar energy roadmap: Impressive Goal for PowerJointly developed by the BERDC and the Bhutan Power Corporation (BPC), the Rubesa Plant, located in Rubesa, Wangdue, comprises 576 solar panels and is expected to Harnessing Bhutan's solar potential with market-driven solutionsNearly all of Bhutan's electricity comes from its glacier-fed hydropower plants. In a first major step towards diversifying its energy mix, the Himalayan Kingdom initiated a 180-kW 500KV ground-mounted and grid-tied Solar PV The Dechencholing plant is expected to generate an annual electricity of 835,000 Units (kWhr) and a revenue of Nu 3.8 million. The panels cover a ground area of 1.2 acres. First phase of Bhutan's Utility-Scale Solar Project A utility-scale solar facility generates solar power and feeds it into the grid. The 17.38-megawatt solar farm is expected to generate around 24 million units of energy annually, once operational. Bhutan Solar Initiative Project (BSIP) Bhutan Solar Initiative Project (BSIP) aims towards achieving a sustainable energy supply for Bhutan through alternative renewable energy sources of solar grid integration. PRESS RELEASE Solar power in Bhutan has a complimentary annual power generation profile to hydropower enabling climate adaptation by diversifying the power generation portfolio, creating system Bhutan has set an ambitious target of
