---

An off-grid rooftop solar system is a self-sustaining photovoltaic (PV) system that allows a home or building to generate and store its own electricity with 100% independence from the utility grid. Off-grid rooftop solar systems refer to photovoltaic (PV) systems that are not connected to the electric grid. Unlike on-grid systems, which rely on utility electricity as a backup, off-grid solar systems are completely independent of the grid, instead relying on solar batteries to store excess energy. Off-grid solar systems capture sunlight energy and store it in batteries to power homes and buildings independently from the utility grid. These complete energy solutions include solar panels, charge controllers, battery banks, and inverters that work together to provide reliable electricity 24/7.
