Are solar power systems a viable option for the Solomon Islands? Solar power systems are now an affordable option for households looking to reduce their power bills and generate their own electricity. There is an increasing number of products and suppliers on the market, most of which will be able to be connected to the Solomon Islands grid. How many solar homes are there in the Solomon Islands? "Solomon Islands currently has one of the lowest levels of access to electricity in the region, with over 85% of the population of Solomon Islands still without access to electricity and for this project alone, we received over 6,000 applications to obtain only 2,000 solar home systems," said Mr Aimaea. How do solar panels produce electricity in the Solomon Islands? Solar PV panels produce most power when they are pointed directly at the sun. In the Solomon Islands, solar modules should face north for optimum electricity production. The orientation of the panels will often have a greater effect on annual energy production than the angle they are tilted at. Can solar panels be connected to the Solomon Islands grid? There is an increasing number of products and suppliers on the market, most of which will be able to be connected to the Solomon Islands grid. Solomon Power follows the Australian/ New Zealand standards for connection of solar panels to its electricity grid. Does Solomon power purchase excess energy from a photovoltaic system? Solomon Power does NOT purchase excess energy from a domestic or commercial photovoltaic system. Solomon Power DOES apply a daily standby charge for the operation of solar PV arrays that are connected to its network. This is 50% of the power that is generated by the array and consumed internally by the customer. What is the power generation capacity of Solomon Islands? The power generating capacity of the Solomon Islands is currently 10.2 MW, which is equal to its peak load capacity. One mining company in the Solomon Islands generates its own electricity with a power capacity of 11 MW and a peak load of 8 - 9 MW. Solomon Power will install, at your cost, a bi-directional meter. This allows the measurement of power that is consumed from the grid, as well as separately measuring an exported power back into the grid. Solomon Power will install, at your cost, a bi-directional meter. This allows the measurement of power that is consumed from the grid, as well as separately measuring an exported power back into the grid. Solar energy can help save you money on your electricity bill by replacing some of you consumption from the Solomon power grid. Solar power systems have no moving parts, are extremely reliable, and have a long expected life span. They are self-cleaning, easy to install and require very little in Noro, Western Province, located in the Solomon Islands, presents a highly favorable location for solar energy production throughout the year. This tropical setting offers consistent sunlight, making it an excellent candidate for solar photovoltaic (PV) installations.
